

The Environment

We care about our effect on the environment and take it very seriously at Lakeside. We are proud of our program and record.

- We strive at all time to reduce the amount of solvent based materials used in the course of line of work, which reduces green house gas emissions
- When it is necessary to use solvent based material we use VOC compliant material (volatile, organic, compounds) to help keep emissions as low as possible
- Whenever possible we recycle solvents to conserve consumption and reduce disposal costs.
- We keep our solvents in properly sealed and labeled containers at all times to protect the environment as well as protecting your home.
- We are listed as a ***Toxic Waste Generators*** with the

EPA and the ***DNR***

- This means we properly and legally dispose of all waste generated during the course of our operations through "[Brenntag Great Lakes, LLC](#)" a licensed bonded deposal company tracks all waste from "Cradle to Grave" ..
- At Brenntag, the waste is distilled and recycled whenever possible or used as fuel for other operations conserving the need for additional petroleum requirements.
- ***WE DO NOT AT ANY TIME:*** Leave solvents on a jobsite your home for others to deal with. Dump, burn, or pour solvents into the ground.
